CHANDU HEMANTH **Email: hemanth.chandu07@gmail.com**
Azure Data Engineer **Mobile: +91 9014395697**

Career Summary

- Having 4+ years of IT experience in Azure Data Engineer including Azure Data Factory, DataLake Storage, Databricks, Pyspark, Spark SQL, Logic Apps, Synapse Analytics and Power BI.
- Good hands-on experience in creating a Pipelines in ADF using Linked Services, Datasets, Pipeline and Dataflow to Extract, Transform and load data from different sources like Azure SQL, Blob storage.
- Extensive experience in Extract Transform and Load data from Source Systems to Azure Data Storage services using a combination of **Azure Data Factory**, T-SQL, Spark SQL Data Ingestion to one or more Azure Services - (**Azure Data Lake, Azure Storage, Azure SQL**).
- Used Control Flow Tasks like For Each Activity, Switch Activity, Get Metadata Activity, If Activity, Lookup Activity and also Copy Activity Web Activity, and Execute Pipeline Activity.
- Experience in Dataflow Components, Control Flow Elements, Connection Managers, and **Triggers**.
- Have Experience in using **Azure Key Vault** and **Logical Apps**
- Integrated Git Repository to automate and improve **CI/CD** process
- Good experience in Data extraction (extract, Schemas, corrupt record handling), transformations and loads (user - defined functions, join optimizations) and Production (optimize and automate Extract, Transform and Load).
- Good hands-on experience in Databricks by applying transformations using **Pyspark** and **Spark SQL**
- Azure Data Factory (ADF), Integration Run Time (IR), File System Data Ingestion, Relational Data Ingestion
- Experience in programming languages such as Python, with Data Bricks Pyspark, designing and building data engineering workloads to leverage cloud computing, and application of DevOps tooling and frameworks for the building of data pipelines.
- Good understanding of Spark Architecture including Spark Core, Spark SQL, Data Frames, Spark Streaming, Driver Node, Worker Node, Stages, Executors and Tasks.
- Experience in data modeling and Proficient in SQL developer skills in writing stored procedures, functions, transformations etc.
- Design & deploy ETL, ELT jobs to curate, transform and aggregate data to create source models for end user analytics use cases.
- Scheduling automation and monitoring instrumentation for data movement jobs.
- Expertise in various phases of project life cycles (Design, Analysis, Implementation, and testing).

Technical Expertise

- **Azure Platform:** Azure Data Factory, Data Bricks, Pyspark, Spark SQL, Azure data lake storage, Azure SQL, Logic Apps, Key Vaults, Unity Catalog, Synapse Analytics.Fabric.
- **RDBMS**: SQL Server
- **Programming Languages**: Python, SQL

Organizational Experience:

- Working as **Data Engineer** in **Tata Consultancy Services (TCS)** from **January 2022 till Present.**

Education:

- Completed **Bachelor of Technology - Tech(EEE)** from **Bapatla Engineering College.**

Project Experience:

Project # 4

Project Name	:	EUA- Cloud Modernization & EU- ORA
Client	:	EXELON Corporations
Role	:	DATA ENGINEER
Project Specific Skills	:	Azure Data Factory, Azure Data Bricks, Azure Logic Apps, SQL, Python.

Overview: Exelon is the nation's largest utility company of USA serving more than 10 million customers through six fully regulated transmission and distribution utilities — Atlantic City Electric (ACE), Baltimore Gas and Electric (BGE), Commonwealth Edison (ComEd), Delmarva Power & Light (DPL), PECO Energy Company (PECO), and Potomac Electric Power Company (Pepco).

We maintain consumer information from a variety of legacy source systems across the organization – characteristic of a "bonding agent" that keeps our virtual data intact and glued together – to ensure we can compile the entire history and relationship with each individual we serve. Data is updated daily through contributing sources and is accessible on a transactional basis. We bring up clean, improvised data for the Business Insights in Cloud using Azure platforms.

Responsibilities:

- Responsible for creating an ETL pipeline with Azure Ecosystem like Azure Data Factory. Building simple to complex pipelines, activities, Datasets & data flows.
- Supporting and helping with the development of Logic Apps, Azure Function apps and Power Shell Workflows.
- Utilizing Azure compute services [Data bricks, Spark,] to design transformation logic and stage transformed data.
- Implemented Databricks Unity Catalog for centralized data governance, enhancing data security, compliance and reducing audit preparation time by 70%.
- Build the ETL pipelines using Pyspark and spark SQL by performing transformations.

- Experience in programming languages such as Python, with Apache Spark, designing and building data engineering workloads to leverage cloud computing, and application of DevOps tooling and frameworks for the building of data pipelines.
- Experience in Extract Transform and Load data from Source Systems to Azure Data Storage services using a combination of Azure Data Factory.
- Usage of various ADF connectors and linked services like Blob, Azure DWH, Azure Data Lake, Azure sql server. Implemented SCD type1, 2, email notifications using logic app, rollback using batch id and error handling.
- Creating Logic apps to integrate applications, data, and services, systems across various enterprises or organizations.
- Creating logic app to send email notifications to different users when an event happens in various applications, services, and systems, etc.
- Design & deploy ETL, ELT jobs to curate, transform and aggregate data to create source models for end user analytics use cases.
- Experience in data modeling and Proficient in SQL developer skills in writing stored procedures, functions, transformations etc.
- Experience with MS SQL Server skills.
- Working with Azure key vaults.
- Scheduling automation and monitoring instrumentation for data movement jobs.

Project # 3

Project Name : DATAIntegration
Client : Toyota
Role : ADE
Project Specific Skills : Azure Data Factory, ADLS Gen2, Logic Apps, Azure SQL Data Base, SQL Server,Databricks,python,pyspark

Overview: Toyota Motor Corporation is a global automotive industry leader manufacturing vehicles in 27 countries or regions and marketing the company's products in over 170 countries and regions. Founded in 1937 and headquartered in Toyota City, Japan, Toyota Motor Corporation employs nearly 350,000 people globally.

Responsibilities:

- Involved in Business requirement document walk through to understand functionality
- Involved in planning and development of ETL pipelines using ADF.
- Extract the Data from Azure data lake storage to Azure Data Factory.
- Call the REST API to get the transaction id for each Batch file.
- Prepare the transformations as per requirement by using activities and data flows.
- Scheduling and monitoring pipelines.
- Load the transformed data from ADF to Azure SQL data base.

Project # 2

Project Name	: HSBC Fusion
Client	: HSBC
Role	: ADE
Project Specific Skills	: Azure Data Factory, ADLS Gen2, Logic Apps, Azure SQL Data Base, SQL Server

Overview:

HSBC is a leading global financial services organization committed to connecting customers to opportunities worldwide. With a strong presence in both established and emerging markets, HSBC supports individuals, businesses, and institutions in managing their financial needs. The company offers a wide range of services including retail banking, wealth management, commercial banking, global banking, and markets solutions. HSBC empowers clients through innovative financial tools, global expertise, and a deep understanding of local economies, helping them thrive in a rapidly evolving financial landscape.

Responsibilities:

- Involved in Business requirement document walk through to understand functionality
- Involved in planning and development of ETL pipelines using ADF.
- Extract the Data from Azure data lake storage to Azure Data Factory.
- Call the REST API to get the transaction id for each Batch file.
- Prepare the transformations as per requirement by using activities and data flows.
- Scheduling and monitoring pipelines.
- Load the transformed data from ADF to Azure SQL data base.
- Involved in daily status calls.
- Importing the data from data sources and preparing the data as per user requirement using power query editor.
- Building the relationships between the various data sets in power pivot.
- Created new columns, new measures and conditional columns using DAX functions.
- Created different filters like visual level filters and page level filters and report level filters as per reporting needs.

Project # 1

Project Name	: Medeva
Client	: Juxt Smart Mandate Analytical Solutions
Role	: SQL Developer
Project Specific Skills	: SQL, adf,

Overview: JXM is a Decision Science and Analytics Company that will enable doctors to provide quality patient care. JXM is focussed on working closely with doctors to offer them an effective and easy to use solution that will impact clinical outcomes. JXM helps doctors to capture and utilize patient health information from their practice, collaborate with other doctors to create RWE based protocols, care pathways, write research papers and introduce evidence-based care that is relevant and customized for their patient population.

Responsibilities:

- Understanding business requirement and functional requirements specification, analyzing the requirements and preparing understanding document.
- Responsible for preparing Test strategy, Test plan, design test cases and scripts, test execution and peer reviews.
- Attending daily sync up calls with BA/development teams for the project discussions and participating triage (defect) calls.
- Entrusted with the responsibility of identifying bugs in new and existing code, determining root causes, and suggesting possible bug fixes; conducted formal software testing to verify that all functional requirements have been met. Worked on regression suite, creating test plans for upcoming releases across different environments.
- Importing and transforming data from various on-premises and cloud data sources using **Azure Data Factory (ADF)** pipelines and dataflows.
- Developing and maintaining complex **SQL queries**, stored procedures, functions, and views for data extraction, transformation, and validation as per business requirements.Created new columns, new measures and conditional columns using DAX functions.
- Performing data cleaning, joining, and aggregation using **T-SQL** to support analytics and reporting requirements.
- Designing and implementing **data pipelines** in ADF for end-to-end data movement, transformation, and orchestration between different environments.
- Creating and monitoring linked services, datasets, and triggers in **ADF** for automated data integration workflows
- Conducting performance tuning and optimization of SQL queries for efficient data retrieval and faster execution.
- Collaborating with business teams to validate data accuracy, ensure data consistency, and troubleshoot issues in data pipelines.
- Publishing validated data to downstream systems and ensuring secure access and version control through Azure environments.
