K. Satya Sai Durga

DevOps and Cloud Engineer

Email: satyakotipalli222@gmail.com

Mobile: +91 7661995127

CAREER OBJECTIVE

To get a challenging position in the IT industry in the field of Cloud & DevOps technologies where my capabilities can be exploited for the growth of the company and provides ample scope for career growth to IT Company.

CAREER SUMMARY

Dedicated and results-driven Devops professional with 6+ years of hands-on experience in optimizing and streamlining IT operations, reducing cloud costs, and enhancing organizational processes. Seeking a challenging role to leverage expertise in Devops technologies and cloud infrastructure to contribute to a dynamic team.

- Total **6**+ years of Experience and having **6+** years of IT Experience as a **DevOps Engineer** in the fields of **automation, Software Configuration Management, developing and Cloud services.**
- Proven experience on creating Branching and Tagging concepts in Version Control tools like **GIT**.
- Supporting the Git users in terms of all common Git end user operations such as Git clone, Git push, pull, fetch, Git repo, branching & merging.
- Experience in automating **CI & CD** pipeline using **Jenkins** tool.
- Proficiency with Configuration Management tools & Build management tools such as **Ansible, Chef, Maven, GIT, shell script, Jenkins, Docker.**
- Experience in writing **Playbooks and** creating Roles for Scalability and Reusability in **Ansible.**
- Experience in **provisioning, orchestration, package, configuration, services** and **deployment** using **Ansible.**
- Experience in **AWS** to manage and configure **EC2** services and well knowledge on the **S3, VPC, Auto scaling, EBS, ELB, RDS, IAM.**
- Experience on Automate the Build and deploy of all internal **Python, Ruby,** applications of bank to lower environments by using **Ansible, Jenkins and Shell scripts.**
- Automation of build process **(Build Automation)** using Jenkins, Maven and Git.
- Worked on **Dockers** Including **Docker Installation**, Creating **Docker Images, Docker Files** and **Dockers Containers**.
- Experience on **Maven** build tools for compiling and packaging artifacts.
- Experience in Deploying **EAR, JAR, WAR** files in **Tomcat** in Linux/Windows Environment.
- Experience on repository tool **Nexus** with **Maven** integration from **Jenkins** Pipeline.
- experience in **SonarQube** with Maven from Jenkins Pipeline
- Configured the servers with the **Grafana** with **Prometheus** monitoring tool and monitored the performance metrics of the production servers.
- Experience in Installing, Upgrading. Patching, Configuring and Administering Red Hat Linux.
- Good Knowledge on **Kubernetes**, Find and watch the logs by using log management tool **ELK** and installation.
- Experience with **Apache / Tomcat And** experience in making configuration changes.
- Having good experience on nexus **& Jfrog** Artifactory repository.

- Ability to work in both independent and Team environments.

Technical skills:

Operating Systems	• Linux, UNIX & Windows
Version Control System	• GIT,GITHub,Git Lab
Build Management Tool	• Maven
Scripting Languages	• Shell script, Python
CI/CD	• Jenkins, Teamcity, Argo CD and GitLab CI
Configuration Management Tools	• Ansible
Infrastructure as Code	• Terraform
Containerization Tools	• Docker, Kubernetes
Cloud Technologies	• AWS, Azure
Monitoring Tool	• Grafana, Prometheus
Log Management Tool	• ELK

Professional Summary:

Capgemini, Hyderabad-Devops Engineer **Mar 2026 – Aug2026**

Attainments:

Responsibilities:

- Designed, developed, and maintained CI/CD pipelines in Jenkins for automated build, test, artifact management, and deployment processes across Dev, QA, Stage, and Production environments.
- Troubleshot Jenkins pipeline failures, analyzed build logs, resolved dependency and environment issues, and optimized pipelines to improve build performance and reliability.
- Managed GitHub repositories, branching strategies using GitFlow, pull requests, code reviews, merge strategies, and release branches.
- Integrated GitHub webhooks with Jenkins to trigger automated CI/CD pipelines based on code commits and pull requests.
- Configured and maintained Nexus Repository Manager for centralized storage and management of build artifacts.
- Managed Maven, npm, and Docker repositories in Nexus and implemented artifact versioning, retention, and promotion strategies.
- Integrated Nexus with Jenkins for automated artifact upload, retrieval, validation, and deployment across multiple environments.
- Automated deployments across Dev, QA, Stage, and Production environments with environment-specific configurations, approval gates, health checks, and rollback mechanisms.
- Developed reusable Jenkins pipeline components and shared libraries to standardize CI/CD processes across multiple applications.
- Developed and integrated Bash/Shell scripts into Jenkins pipelines for build automation, server configuration, deployment, log collection, health checks, and operational tasks.
- Monitored application deployments and infrastructure health, investigated failures using logs and system metrics, and supported production issue resolution.
- Collaborated with developers, QA engineers, and operations teams to improve release processes, reduce manual activities, and streamline software delivery.

- Used AWS services as part of the DevOps and application delivery ecosystem, including IAM, EC2, S3, CloudWatch, and other AWS services required for deployment and automation.
- Worked with Amazon SageMaker to support machine-learning workloads by automating model-related build, packaging, deployment, and environment-specific promotion activities through CI/CD pipelines.
- Integrated SageMaker workflows with DevOps practices to automate deployment of ML models and maintain consistent development, testing, staging, and production environments.
- Used Amazon Bedrock to integrate foundation models/LLMs into applications and automation workflows, supporting AI-powered features while maintaining controlled deployment through CI/CD pipelines.
- Developed automation around Bedrock-based applications to manage configuration, deployment, testing, and promotion of AI/LLM workloads across different environments.
- Used LLMs to assist with DevOps troubleshooting, log analysis, error identification, root-cause investigation, and generation of remediation suggestions during pipeline and deployment failures.
- Leveraged LLM-based automation to analyze Jenkins build failures and Linux/application logs, summarize issues, and accelerate troubleshooting and incident-resolution activities.
- Used GitHub Copilot to accelerate development of Jenkinsfiles, Bash scripts, Python automation scripts, infrastructure/configuration code, and deployment utilities.
- Used GitHub Copilot to improve existing automation scripts, generate reusable code snippets, identify potential errors, and speed up development of CI/CD automation while validating all generated code through testing and code review.
- Explored LLM-assisted automation for generating deployment documentation, troubleshooting runbooks, release notes, and operational summaries from CI/CD and deployment information.
- Implemented security and access-control practices using GitHub permissions, Jenkins credentials management, AWS IAM roles/policies, and secure handling of secrets and configuration values.
- Participated in release management activities including version tagging, artifact promotion, deployment approvals, production releases, rollback procedures, and post-deployment validation.
- Continuously improved DevOps processes by identifying repetitive manual tasks and replacing them with automated Jenkins, Shell, Python, AWS, and AI-assisted workflows.

Environment: Git, Jenkins, AWS, Azure, CI/CD, Docker, Kubernetes, JFrog, Linux, Terraform, Helm Charts

Virtusa, Hyderabad-Devops Engineer Sep 2022 – Jan 2026

Attainments:

Responsibilities:

- Configuring the Docker containers and creating docker files for different environments.
- Configure horizontal scaling: Scale in and out using Auto Scaling, add and remove instances as needed to handle the growing workload.
- Written Simple Ansible YAML scripts to configure the servers.
- Designed Playbooks to manage configurations and automate installation processes.
- Coordinate/assist developers with establishing and applying appropriate branching, merging conventions using GIT source control.
- Configured and maintained Jenkins to implement the CI process and integrated the tool with Maven and to schedule the builds and automated the deployment on the application servers using the “code deploy” plug-in for Jenkins.
- Automate the builds and deployment of JAVA Projects using Maven and Jenkins.

- Creating CI/CD pipelines by integrating Git, GitHub, Maven, Jenkins, Chef, Monitoring Tools and AWS (provisioning).
- Setup and Managing VPC, Subnets, make connections between different zones.
- Creating snapshots, AMIs, Elastic IPs and managing **EBS** volumes.
- Managed and monitored the server and network infrastructure using **Nagios**.
- Work with development/testing, deployment, systems/infrastructure and project teams to ensure continuous operation of build and test systems.
- Provided end-user training for all GitHub users to effectively use the tool.
- Experience working on **Docker hub**, creating Docker images and handling multiple images primarily for middleware installations and domain configurations.
- Design and create automated Build and Deployment processes.
- Upload Build artifacts into Amazon **S3** location.
- Configuration of **SonarQube** with Jenkins.
- Involved in installing Jenkins on a Linux machine and created a Master and Slave configuration to implement multiple parallel builds through a build form.
- Build, manage, and continuously improved the build infrastructure for software development engineering teams including implementation of build scripts, continuous integration infrastructure and deployment

Environment: GitLab, Git, Cloud, JFrog, CI/CD, Shell, Linux, Terraform, Jenkins,Kubernetes

Wipro, Hyderabad-Devops Engineer July 2019 - July 2022

Attainments:

Responsibilities:

- Automate infrastructure in AWS using Amazon web services. Deploy Chef to completely provision and manage AWS EC2 instances, volumes, DNS and S3.
- Automate the tasking using Chef, Deployed Chef, Chef Dashboard and Chef DB for configuration management to existing infrastructure.
- Created continuous integration system using Git, Maven, Jenkins, Chef, full automation.
- Deploying the JAR / WAR files in Tomcat app server.
- Integrated Build Process through Jenkins to SCM tools like GitHub.
- Monitoring daily builds using continuous integration tool Jenkins.
- Work Experience on creating EC2 instances and snapshots in Amazon web services.
- Launching and configuring Amazon EC2 Cloud Servers using AMI's (Linux/Centos) and configuring the servers for specified applications.
- Implemented automated unit testing, code quality checks, artifact validation, and deployment verification as part of CI/CD pipelines.
- Performing deployments to multiple environments like Dev, QA, Perf, UAT & Production environments.
- Responsible for Creating and maintaining builds and Administering Jenkins and Involved in Deployment related activities

Environments: Jenkins, AWS, Apache, GIT, Chef, Maven.Git Lab,Docker

EDUCATION:

- B. Tech in Srinivasa Institute of Engineering Technology,

  JNT University, Kakinada. Graduated in 2018 in electrical and electronic engineering with 77%
